They're easy to clean and maintain, they can change the look of your bathroom and they're fairly inexpensive. They're also easy to install without professional help. Save money by doing it yourself with these steps.Measure and Shop for a ReplacementYou'll need to have a replacement shower and enclosure before starting the installation process, and you'll want to make sure you select the right size. Measure the height and widths of the walls in your shower area as well as the size of the lower pan. Buying a replacement with the same-size pan is a good way to make the process go smoothly. You'll also want to measure the distance to the holes needed for the faucet and other shower fixtures so you can cut them yourself if necessary. Finally, choose a replacement that's the right style and color for your bathroom.Remove the Old Shower, Enclosure and FixturesUnless you're starting from scratch in a new or remodeled home, you'll need to remove the old shower and enclosure first along with all of the pipes, the pan, the fixtures, the hardware and the drain. Your shower probably has caps on it that match the color of the enclosure. Pop those off, and you'll find screws underneath them to begin the removal process. The shower head should come off by simply turning it counterclockwise, while the drain shoe can be removed by placing pliers into it and turning it counterclockwise. Use a flat bar to pry off the wall panels.Set Up the Pan and DrainThe pan and drain should fit right into place where the old one did if you measured for them correctly. If the pan fits, take it out and mix up some thin mortar and water to form a paste. Use it to set the new pan back into place, and add some caulk around the edges to ensure water doesn't seep through where it isn't supposed to.Set Up the ShowerSome fiberglass showers come in one piece, while others require assembly. If yours came in multiple pieces, you'll need to put these together before you put everything into place. Apply some adhesive to the wall panels on the new shower enclosure as well as on the studs in your walls, and push the enclosure into place. Allow the adhesive to dry.Caulk and Apply the Last TouchesNext, add caulking to any places where water may leak through, including where the pan meets the panels and where the panels meet if you had to put the enclosure together yourself. Run a wet finger over each line of caulk to flatten it out. When it dries, replace your hardware and fixtures in the opposite order in which you took them out. Make sure all caulking is dry before you use the shower. MORE FROM QUESTIONSANSWERED.NET Amazing white and gray marble master bathroom with large glass walk-in shower, freestanding tub and skylights on the ceiling. Northwest, USA One of the more prominent projects among do-it-yourselfers involves repairs in the bathroom, and specifically, the shower. Projects can include installing a bathroom shower, repairing a shower base, installing shower glass or putting a corner bath and shower unit in an otherwise empty space.Needless to say, doing some research will put you ahead of the game, whatever your project happens to be. We've put together a quick guide on how to approach a bathroom shower installation.Make the Most of SpaceMany homeowners have found that a corner shower can fit well into space such as an unused corner in a master bath. It can also have the effect of transforming space that is otherwise clunky or messy in a small bathroom, adding both economy and streamlined design. If you have a small or awkwardly shaped bathroom, Better Homes and Gardens recommends a corner shower as a wise space-saving option.They also note that you should keep in mind four aspects of a corner shower unit: shape, installation, doors and features.Choosing a Shower ShapeYou'll want to start by selecting a base, or pan, which is the shape of your shower. They come in shapes that include round, square, rectangular, triangular or neo-angle, which includes a diamond base shape for a door, two back walls and two beveled sidewalls. As you might suspect, the more elaborate the shape, the more it can cost. You also need to measure carefully when selecting the shape, as you want to be sure your space can accommodate the shape that you prefer.Shower Installation OptionsInstallation is the next step for transforming your bathroom with a shower. You might opt for a stall that is prefabricated or you might want to upgrade and tile the corner walls. In any case, you have many choices. You can find a shower unit at a major home supply store in a variety of colors and textures, including bases that look like tile, starting in the range of \$500 to \$700. Prefab showers are affordable, watertight and easy to keep clean, which can be a real plus in busy households.If you have a very specific look in mind, you might want to create your own look with tile. In that case, use a cement-based board on the walls and add stylish tile to your heart's content. This can be more expensive than an off-the-shelf shower, but it can also give you real bathroom style. Many consumers hire pros for installation.Decide on the Right DoorDon't forget to think about the door you want on your shower. If you've selected a prefab shower, it will usually include a glass door with a metal frame. More costly shower units will feature brackets that support a frameless door, which can be a more contemporary and elegant look.Of course, if you are installing a custom shower, you can select any door, provided that you measure carefully at least twice. Keep in mind that an unframed door often requires professional installation. Think about whether you need your door to open to the left or the right, regardless of what shower option you choose. In either case, you can opt for clear, frosted or textured glass. If you have a choice of metal frames, think about which type of metal will match or complement your existing bathroom fixtures.Enjoy the DetailsYou might be surprised at what you'll find in a prefab shower, in terms of additional features. For instance, some prefab showers include bench seating and grab bars. You'll also have surprisingly abundant choices in regards to shelf space and shaving nooks.If you decide to create your own custom shower, you will be able to choose just the right hardware, seating and shower head options, to create the shower you've imagined in your dreams.
